## ***Workflow Integration Tips***

---

Here are some suggestions for integrating the Viewer into your practice workflow. While every practice and healthcare facility is not identical, these suggestions have been provided by physicians and medical staff who are currently using the Viewer.

### **Prior to patient's arrival, or at patient check-in**

- Check to see if patient is enrolled in CurrentCare
- Record the patient's CurrentCare ID number in the practice's EHR
- Speak to the patient about the benefits of enrolling.

### **Pre-visit planning**

- **LAB** Screen: Check to easily see most recent lab results from disparate sources, all in one place.
- **ENCOUNTER** screen: quickly see that a patient has had a recent ED visit
- **MEDICATIONS** screen: identify a recent medication which may have been prescribed by a walk-in treatment center or a specialist.

### **During patient visit**

- **LAB** Screen: Check when patient says they had a lab test performed and the physician doesn't have the result available.
- **MEDICATIONS** screen: check during Med reconciliation with the patient to see a list of dispensed medications; realize that a medication that is supposed to be taken daily has only been dispensed once in six months.
